## Recent Projects

### Open Meta

Web application built using a Node.js backend integrated with the OpenCPU framework and a react frontend. It allows users to browse scientific studies and perform meta-analyses. Users can submit studies that are automatically tracked and made available for other users.

### Hive-source

Web application built using JavaScript, jQuery, MongoDB and WebSockets to allow team members to collaborate on a wide range of tasks in real-time. Designed to allow tracking of responsibilities as well as feedback on project urgency.

### Mimir's Market

Online marketplace with both SQL and NoSQL database integration. Application tracks purchases by user with integrated back-end analytics such as site revenue streams by item and category.

### Ponz.io

Social networking app using JavaScript and MongoDB. Users who recruit others are awarded points that can be used in the store. The network of those recruited by the user is dynamically rendered onto the user's homepage.

---

## Experience

NOV 2017 – FEB 2018

### **Software Engineering Apprentice / Viking Education**

Accelerated training program. Built production web applications as part of rapid iteration team using Agile methodologies and modern technology stacks. Applications included a full-featured social network and single-page apps like a historical stock portfolio simulator and a task-management system.
